

Jhonalbert Alvarez

I build the revenue systems I sell.

+57 314 207 5466 · jhonalbert926@gmail.com · linkedin.com/in/jhonalbert-alvarez · pretending2bejhon.github.io · Colombia, working remotely on EU & US hours

Sales and RevOps professional who builds his own tooling. Two years on high-volume sales floors, then cofounded Frakkr, where I designed the CRM, the outbound infrastructure and the AI agents that run our pipeline. Today I embed with a client's engineering team, build the AI system inside their existing stack, and hand it back documented, running, and with the controls that tell you when it stops working. Spanish native, English C1 certified.

EXPERIENCE

Co-founder & Head of Growth · Frakkr

Remote, US market | Jan 2026 – Present

AI intake and automation for US personal-injury law firms, plus enterprise AI enablement. I own revenue end to end on a 4-person team, and wrote the playbooks it sells with: cold-call flow, objection handling, discovery, compliance guardrails.

- Landed an AI enablement engagement with **Farmatodo** (Colombian pharmacy retailer, 143 stores, about 2,000 POS registers): ran the architecture diagnostic that produced the systems map their team lacked plus a 14-item automation backlog, and built the 1:1 training program (context engineering, agent skills, scheduled routines) on their live Oracle and n8n workflows. Agreed success metric: hours recovered per process, from 3-5 hours to minutes.
- Stood up the outbound machine from zero: isolated Google Workspace tenants on secondary domains, automated warmup, and CAN-SPAM/TCPA-compliant multichannel sequences (email, LinkedIn, cold calls).
- Designed two generations of the CRM. In the current base the funnel is computed: stage, fit score, intent and priority quadrant are formulas derived from activity dates, so pipeline state cannot be hand-corrupted.
- Put AI agents on the pipeline: six scheduled watchers (reply detection, deadline risk, revenue tripwires, weekly funnel digest), a five-phase enrichment pipeline (Google Places, Apollo, scraping) and cold-lead scoring, each red-teamed for prompt injection before being trusted with writes.
- Shipped the company's first inbound asset: an 11-question intake-leak diagnostic that shows a firm in dollars what its intake is losing, and converts the reveal into a booked call.

Sales Expert · Asurion

Bogotá | Jul 2025 – Apr 2026

- Ran 50+ inbound service-to-sales interactions a day: resolved the insurance claim first, then pivoted the same caller into a Verizon Home Device Protect subscription, hitting conversion targets on skeptical, often frustrated callers through coverage-gap discovery, plain-language ROI and rapport under pressure.

ML Project Assistant · Universidad El Bosque

Bogotá | Jan 2025 – Dec 2025

Built and evaluated machine-learning models for academic and applied research projects.

Sales & Customer Advisor · ScotiaGBS (Scotiabank)

Bogotá | Jan 2022 – Jul 2023

- Held an 80% first-call resolution rate on a high-pressure financial-products line, with customer satisfaction up 15% on my book. Mined internal banking data to match products to client needs, the first version of the data-driven selling I do now.

SKILLS

Sales & GTM. Cold outreach systems · technical discovery · solutions engineering · objection handling · closing · multichannel cadences · sales compliance (CAN-SPAM, TCPA)

RevOps. CRM design · pipeline automation · AI deployment · scheduled agents · lead scoring & enrichment · attribution · Airtable · n8n · Instantly · Apollo

Data & AI. Python · Claude Code · MCP servers · sub-agents · agent skills · scheduled routines · context engineering · YAML & Markdown context files · LLM automation · prompt-injection hardening · pandas · scikit-learn · SQL

SELECTED PROJECTS

Memory system for AI agents. A knowledge OS I run daily: a boot file states the rules, a routing table loads context only when needed, and scheduled agents brief me each morning and consolidate what they learn at night, promoting durable claims, letting stale ones decay. Guardrails sit between the agents and anything destructive. Eight scheduled agents run it nightly; a 4,480-transcript audit of my own sessions validated its cost model and cut security-rule violations from 773 to 5 per day by relocating one rule.

Book teardown & retention scorecard. Streamlit app for insurance agencies: premium/retention attribution plus an explainable churn model with reason codes. AUC 0.74, 2.6× top-decile lift on a synthetic book, fully offline.

Offline call-QA pipeline. Local Whisper transcription feeding a rubric-scored call teardown as a styled PDF. Recordings never touch a cloud API.

EDUCATION & CERTS

BSc Mathematics coursework

El Bosque University, Bogotá

2024 – 2025

Software Development Fundamentals

Microsoft & LinkedIn

2023
