A copywriter who works inside the sales team. I find the companies a client should be selling to, write the emails and LinkedIn messages, send them, and count the meetings that actually happen. I also build the tools that do it: a research engine over Colombia's public records that answers which accounts are alive and why, and a memory system so a team and its AI answer from one place instead of re-deriving what the business already knew. Two years on high-volume sales floors first, then co-founder and Head of Growth at Frakkr.

EXPERIENCE

Forward Deployed Copywriter · Independent

Colombia, remote | Aug 2026 – present

Direct-response outbound for Colombian B2B companies: every account researched on the public record before a line is written, the emails and LinkedIn messages written and sent by me, and the work judged on replies and on meetings that are held. The memory system is the second product.

- Built the research engine the copy runs on: **1,751,328 Colombian companies**, one row per NIT, joined from RUES, SECOP and datos.gov.co, with an API on top that answers which accounts are alive and why.
- Published the memory system as an open method and benchmarked it against RAG on **498 questions**: out of every 100, an agent searching organized plain files answered 78 right, the same files in one flat folder 75, RAG 55. The half of the result that went against my own design is published with it.
- Built **Icarus** (v0): an outbound agent that drafts every touch with its public-record reason attached and puts each draft through hard gates before anyone sees it (Ley 2300 sending windows, evidence required, copy lint). It drafts and waits for approval. Nothing sends itself.
- Two results with their denominators, no names: one cold LinkedIn message to the head of technology at a university clinic became a meeting he booked himself; a fintech CEO took twenty researched companies and wrote to them himself, fifteen had a working channel, six replied, five meetings.
- Built a read-only browser for agents that reads a company's website, its ads, its reels and its LinkedIn page before the first line is written. It only reads, it never sends.

Co-founder & Head of Growth · Frakkr

Remote, US market | Jan 2026 – Aug 2026

AI intake automation for US service firms, plus enterprise AI enablement. I cofounded Frakkr after two years on high-volume sales floors: I designed the CRM, the outbound infrastructure and the AI agents that ran the pipeline. I owned revenue end to end on a 4-person team, and wrote the playbooks it sold with: cold-call flow, objection handling, discovery, compliance guardrails.

- We won an AI enablement engagement with a **Colombian pharmacy retailer** (more than 140 stores, about 2,000 registers): I ran the architecture diagnostic that produced the systems map their team lacked plus a 14-item backlog of recurring manual work, and built the 1:1 training program (context engineering, agent skills, scheduled routines) on their live Oracle and n8n workflows. Agreed success metric: hours recovered per process.
- Stood up the outbound machine from zero: isolated Google Workspace tenants on secondary domains, automated warmup, and CAN-SPAM/TCPA-compliant multichannel sequences (email, LinkedIn, cold calls).
- Designed two generations of the CRM. In the second the funnel was computed: stage, fit score, intent and priority quadrant were formulas derived from activity dates, so pipeline state could not be hand-corrupted.
- Put AI agents on the pipeline: six scheduled watchers (reply detection, deadline risk, revenue tripwires, weekly funnel digest), a five-phase enrichment pipeline (Google Places, Apollo, scraping) and cold-lead scoring, each red-teamed for prompt injection before being trusted with writes.
- Shipped the company's first inbound asset: an 11-question intake-leak diagnostic that shows a firm in dollars what its intake is losing, and converts the reveal into a booked call.

Sales Expert · Asurion

Bogotá | Jul 2025 – Apr 2026

- Ran 50+ inbound service-to-sales interactions a day: resolved the insurance claim first, then pivoted the same caller into a Verizon Home Device Protect subscription, hitting conversion targets on skeptical, often frustrated callers through coverage-gap discovery, plain-language ROI and rapport under pressure.

ML Project Assistant · Universidad El Bosque

Bogotá | Jan 2025 – Dec 2025

Built and evaluated machine-learning models for academic and applied research projects.

Sales & Customer Advisor · ScotiaGBS (Scotiabank)

Bogotá | Jan 2022 – Jul 2023

- Held an 80% first-call resolution rate on a high-pressure financial-products line, with customer satisfaction up 15% on my book. Mined internal banking data to match products to client needs, the first version of the data-driven selling I do now.

SKILLS

Direct-response copy. Research before writing · email and LinkedIn sequences · AIDA and PAS structures · sending inside Ley 2300 de 2023 · replies handled through to a held meeting · a touch ledger where every number carries its denominator

Delivery inside the client's operation. Technical discovery · architecture diagnostics on live client stacks · embedded build and handover · 1:1 enablement · production cutover

Sales & GTM. Cold outreach systems · technical discovery · solutions engineering · objection handling · closing · multichannel cadences · sales compliance (Ley 2300 and Ley 1581 in Colombia, CAN-SPAM and TCPA in the US)

RevOps. CRM design · pipeline automation · AI deployment · lead scoring & enrichment · attribution · Airtable · n8n · Instantly · Apollo

Data & AI. Python · Postgres · public-record data pipelines · Claude Code · MCP servers · sub-agents · agent skills · context engineering · YAML & Markdown context files · LLM automation · prompt-injection hardening · pandas · scikit-learn · SQL

STACK

The core trio below, Obsidian plus Claude Code plus local AI, is a production memory-and-agents system I built for myself and operate daily.

AI & agents. Claude Code (subagents, hooks, skills, MCP) · Codex · NotebookLM · n8n · fully offline local AI: Ollama (Qwen), Whisper, Kokoro TTS, Stable Diffusion on OpenVINO

Platforms. Obsidian (knowledge system of record) · Airtable · Slack · GitHub · Google Workspace

Scripting & automation. Python · PowerShell · Bash · Playwright

GTM tooling. LinkedIn Sales Navigator · Instantly · Fathom

Client stacks serviced. n8n Enterprise · Claude Enterprise · Gemini on Google Workspace · Databricks · Oracle Retail RMS v16

SELECTED PROJECTS

The memory system. The knowledge system I operate daily, where my agents and I answer from the same plain files: a boot file states the rules, a routing table loads context only when it is needed, and guardrails sit between the agents and anything destructive. Benchmarked against RAG on 498 questions and published in full, the run that went against my own design included. A 4,480-transcript audit of my own sessions validated its cost model and cut security-rule violations from 773 to 5 per day by relocating one rule.

The company spine, Colombia. Joins RUES, SECOP and datos.gov.co into one national record of 1,751,328 companies, one row per NIT, with an API on top that answers which accounts are alive and why. Public records only, inside Ley 2300 and Ley 1581. Built as custom software for a client; it runs under every sequence I write.

Offline call-QA pipeline. Local Whisper transcription feeds a rubric-scored teardown into a styled PDF in minutes, not days. Runs on real sales calls, not synthetic data. Recordings never touch a cloud API.

EDUCATION & CERTS

BSc Mathematics coursework
El Bosque University, Bogotá
2024 – 2025

Software Development Fundamentals
Microsoft & LinkedIn
2023

LANGUAGES

Spanish	native
English	C1 certified
