FORWARD DEPLOYED ENGINEER · B2B OUTBOUND · REVOPS · AI SYSTEMS

Jhonalbert Alvarez

I build the revenue systems I sell.

+57 314 207 5466 · jhonalbert926@gmail.com · linkedin.com/in/jhonalbert-alvarez · github.com/pretending2bejhon · jhonalbert.com · Colombia, open to relocation, remote on EU & US hours

PROFILE

Forward deployed engineer and co-founder. Since January 2026 I have scoped problems with the people who run them and built the systems that fix them, inside their stack: an AI enablement engagement with a 140-store pharmacy retailer, an agent in daily production, a memory system that beats RAG 78 to 55 on 498 questions, and a data API over 1.75 million Colombian companies, built and delivered to two sellers. Before I build, I sell: research-first outbound that gets buyers to book the meeting themselves.

EXPERIENCE

Forward Deployed Engineer · Independent

Colombia, remote | Aug 2026 – present

Freelance for small and mid-size businesses, one operation at a time: scope the problem with the people who have it, build in their stack, keep it running.

- **Zoro**, an operations agent in daily use since Oct 2026 · Claude Agent SDK, Python, Slack Bolt, Google APIs. Every morning it posts the state of email, calendar, LinkedIn and tasks to Slack, and every outward action waits for a tap. 96 requirements with acceptance tests; 92 pass.
- **The memory system** my agents and I work in every day · markdown, Python, an eval harness. Saves me about 3 hours a day of re-explaining context. Against RAG on 498 questions: organized files 78 per 100, flat folder 75, RAG 55. Published as an open spec (typed markdown, a placement algorithm, a nightly consolidation loop), MIT: github.com/pretending2bejhon/ulpia
- **Radar de Mercado**, a company data API, built and delivered to two sellers (Aug 2026) · Python, FastAPI, Postgres, Playwright, Caddy and systemd on Linux. Joined Colombia's mercantile registry, public contracting and open data into one record per company, 1,751,328 of them, one per NIT, so a seller could ask which accounts are active and why.
- **A creator chat desk** for a client (Oct 2026) · Python, Telegram Bot API. It chats with fans in the creator's voice and sells content for Telegram Stars; a person approves every message before it reaches a fan. 250 tests, one adversarial review, run live on a test bot.
- **BrainOS on Windows**, for a client team (Sep–Oct 2026) · Python, PowerShell, Claude Code hooks. Ported their macOS agent harness (persistent Claude Code sessions, a dashboard, a shared plan convention) to Windows: path handling, guardrail hooks, the installer. 117 tests and a 33-step end-to-end run pass, after two review rounds by a second model.
- **Outreach that books meetings.** One LinkedIn message to a university clinic's head of technology, and he booked the call himself. A fintech CEO wrote to twenty companies from my research: fifteen had a channel, six replied, five meetings.
- Led (Sep 2026) the proposal for **an inventory agent** for a Colombian pharmacy retailer: inventory questions answered from a spreadsheet, in Slack, for the whole team.
- **Also shipped.** This site's 3D layer with frame-rate and size gates (three.js, esbuild) · The Hush, a browser game (TypeScript, Phaser 4, Strudel) at jhonalbert.com/hush · Vault City, the memory system as a 3D night city at jhonalbert.com/memory · a browser CLI my agents read the web through (Playwright, reads only) · a call recorder with local transcripts (faster-whisper).

Co-founder & Forward Deployed Engineer · Frakkr

Remote, US market | Jan 2026 – Aug 2026

AI intake for US service firms, plus enterprise AI enablement. Four-person team: I scoped and built inside the client's stack, and owned revenue end to end: CRM, outbound infrastructure, the agents on the pipeline, the playbooks.

- Won an AI enablement engagement with a **Colombian pharmacy retailer** (140+ stores, about 2,000 registers): architecture diagnostic, systems map, a 14-item backlog of manual work, 1:1 training on their live Oracle and n8n flows. Agreed metric: hours recovered per process.
- Built outbound from zero: isolated Workspace tenants, automated warmup, CAN-SPAM and TCPA-compliant email, LinkedIn and cold-call sequences.
- Made pipeline state impossible to hand-corrupt: in the second of two CRM generations, stage, fit score, intent and priority were formulas from activity dates.
- Put agents on the pipeline: six scheduled watchers, a five-phase enrichment pipeline and cold-lead scoring, each red-teamed for prompt injection before it could write.
- Shipped the first inbound asset: an 11-question intake-leak diagnostic that turns the reveal into a booked call.

Sales Expert · Asurion

Bogotá | Jul 2025 – Apr 2026

- 50+ inbound service-to-sales calls a day: resolved the claim, then sold the same caller a Verizon Home Device Protect subscription. Conversion targets hit on skeptical callers.

ML Project Assistant · Universidad El Bosque

Bogotá | Jan 2025 – Dec 2025

Built and evaluated machine-learning models for academic and applied research.

- Compared logistic regression, decision tree and random forest for loan-approval prediction (Python, scikit-learn, grid-search tuning). Logistic regression won with 82.5% test accuracy, against 79.6% and 71.7%. Written up as an article for the Computational Mathematics Seedbed (SEMAC).

Customer Advisor · ScotiaGBS (Scotiabank)

Bogotá | Jan 2022 – Jul 2023

- 80% first-call resolution on a high-pressure financial-products line, satisfaction up 15% on my book. Matched products to clients from the bank's own data.

SKILLS

Engineering. Python · TypeScript · SQL · FastAPI · Postgres · Playwright · Linux deploys with Caddy and systemd · three.js and Phaser on the web · Git and GitHub · PowerShell · Bash

AI & agents. Claude Agent SDK · Claude Code (subagents, hooks, skills, MCP servers) · Codex · Slack and Telegram bots · context engineering · evals against RAG baselines · prompt-injection hardening · offline local AI: Ollama, Whisper, Kokoro TTS, Stable Diffusion on OpenVINO

Data. Public-record pipelines · pandas · scikit-learn · grid-search tuning

Automation & tools. n8n · Airtable · Obsidian · Slack · Google Workspace

Delivery inside the client's operation. Technical discovery · architecture diagnostics on live stacks · embedded build · 1:1 enablement · handover

Sales, copy & RevOps. Direct-response copy, research first · AIDA, PAS · cold outreach systems · objection handling · closing · multichannel cadences · CRM design · computed pipelines · lead scoring and enrichment · Sales Navigator · Instantly · Apollo · Ley 2300, Ley 1581, CAN-SPAM, TCPA

Client stacks serviced. n8n Enterprise · Claude Enterprise · Gemini on Google Workspace · Databricks · Oracle Retail RMS v16

HOW I WORK WITH AI

Spec first: a design interview and a build loop graded against a rubric before any code. Subagents under a contract: reads fan out, writes never do; one model designs and reviews, another executes. A second model reviews adversarially before anything is called done, and nothing is called done without fresh evidence.

EDUCATION & CERTIFICATIONS

BSc Mathematics coursework · El Bosque University, Bogotá · 2024 – 2025

Software Development Fundamentals · Microsoft & LinkedIn · 2023

LANGUAGES

Spanish native · **English** C1 certified
